## TO 3D XPS PRODUCTS

### Products

Visual impact  
Price  
Durability

Our XPS products are fire rated, easy to install and in general a much more cost effective way of creating a 3D effect. The lightness of this product makes it incredibly versatile, enabling easy transportation or installation in places unsuitable for traditional signage. Available in standard 50mm or 100mm or skimmed to any required depth, we are able to create almost any shape in various finishes giving the appearance of materials such as wood, steel or fabric but without the associated weight. Size isn't an issue for us either, with our giant letters available in any height, the sky's the limit. Suitable for internal and external use, our XPS 3D products have many end uses, basically if you can think it - we can make it!

Built - Up letters

3D logos and crests

Stage props

Wall decor
